

Note 1: Maximum thickness of PCB and luminaire heat sink shall not exceed 3.6 mm.

General note: It is recommended to make an electrical connection between both poles of each polarity on the solder pad.

SMD Push through terminal block - Slim with push wire contacts

1 pole - 46.111.1001-0

Direct insertion of solid and stranded, tinned wire ends

Wires can be released by twisting and pulling the wire simultaneously.

Mounting and wiring position: PCB bottom side

Ballast and PCB terminal block on one level

Machine-compatible "tape-and-reel" packaging

Fixing: Lead-free reflow soldering according to DIN EN 610760-1, section 6  $\,$ 

Material: Housing: PPA, white Contact material: CuNiSiP Contact surface: hot-dip tinned

note 2 32	44 ±02 Fecommended dimension for opening in PCB
1	- Aller P. 1

Note 2: The minimum creepage distance has to be guaranteed, depends on the application.

## Instructions for soldering process

Suitable for leadfree-reflow-profiles according to DIN EN 61760-1 respective DIN EN 60068-2-58 up to peak-temperature of max. 260°C. Due to different application-specific parameters (component arrangement and alignment, soldering system, solder paste), it is recommended to use test runs to determine a suitable profile under production conditions.

Depending on the SMD soldering process and associated parameters a minor discoloration might occur. However, this will not influence the functionality.

Storage time	Solderability up to 6 months when stored between -5°C and +40°C and rel. humidity between 1060% r H. After a storage time of 6 months, solderability has to be checked according to J-STD-002D or DIN EN 60068-2-58:2016.
max. allowed number of reflow-processes	3
Reflow-profile	Reflow-profile (lead-free) $T_{max} = 260 \text{ °C}$ $t_{max} < 10 \text{ sec}$ $T_{L} \ge 230 \text{ °C}$
Solderability	Solderability of components is checked by wetting test according to J-STD-002D
Assembly method	SMD, according to drawing
Recommended solder stencil thickness	100 - 150 μm (recommendation BJB 150 μm)
